

# RFID Account Validation

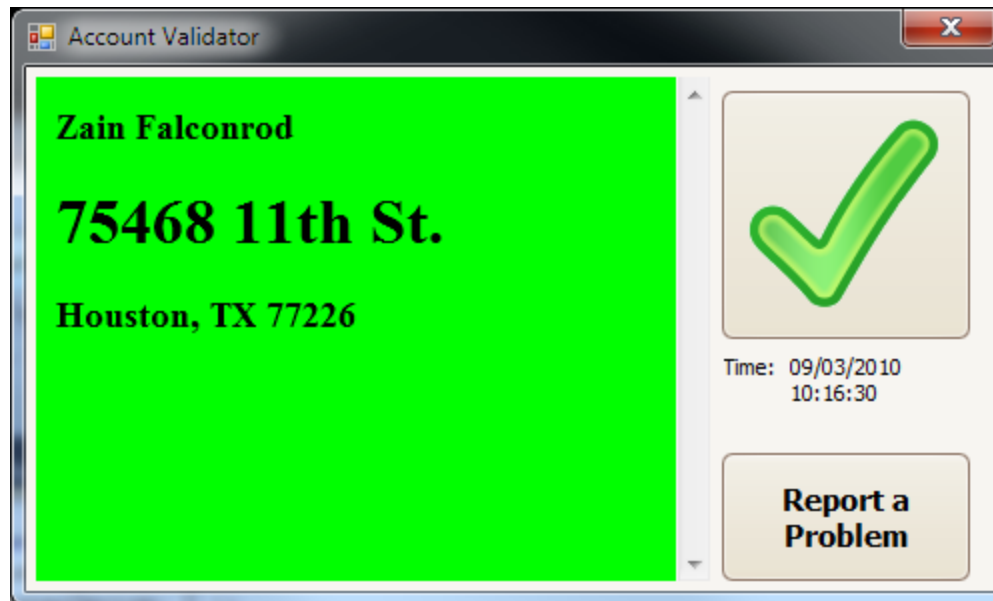

Overall concept:

Use RFID tags to help validate the status of  
Waste Management's customer accounts  
at time of pickup.

## How it works

Collection vehicles would be equipped with RFID Readers and a mobile device that directs the driver to collect or continue.

# Collect

# Continue

## What's required?

RFID Tags associated with the customer's accounting record and attached to the customer's waste receptacle.

RFID Readers and mobile device attached to the collection vehicle.

Data from Waste Management containing the current status of the customer's account.

## Additional Benefits

Mobile device data can be updated as often as needed to ensure accurate waste removal.

Information about the actual route taken can be stored based on the tags along the route.

Time between pickups can be recorded to ensure efficient route planning and execution.
