The Warehouse Inventory Program (WHIP) combines a warehose management system with an order management system increasing productivity, visibility, and accuracy of warehouse operations.

Developed in 2006, WHIP is the standard Warehouse Management System (WMS) for the Used Clothing and Wiping Cloths Industry.

The WHIP Warehouse Management System provides:

- OMS/WMS **interoperability**

- increased productivity and visibility of warehouse operations.

- manufacturing controls and facilitates bale-to-order process.

- increased efficiency of order processing and inventory retrieval.

- in-stock, location based, order fulfillment simulation.

- inventory-to-shipment verification increasing fulfillment accuracy and customer satisfaction.

- analytical tools for SKU classificaiton decreasing picking times and improving space utilization.

- aid in minimizing inventory variance.

- secure, role-based access.

WHIP Client:

OMS Module - Includes profile management, order entry, reporting and order fulfillment simulation using 'pooled' inventory.

WMS Module - Includes inventory **information**/visibility, manufacturing queue, locating, label printing, order staging/shipping, and SKU/Profile analytics.

Admin Module - Configure SKUs, warehouse locations, inserts, user/role-based management, overall administation.

OMS/WMS _integration_ - integrates the front-end customer OMS with warehouse operations (WMS) and backoffice process.

WHIP Mobile Client (additional module):

Find Module - Allows pickers to easily locate items by either entering the SKU or scanning an identical bale helping to quickly locate and find similar inventory.

Locate Module - Allows floor operators to (re)position inventory throughout the warehouse and register the bale's location within the WHIP.

Shipping Module - Allows shippers to reseve or ship inventory with an order, via the handheld device, reducing shipping errors.

Information Module - Allows floor operators to find bale information of torn labels and reprint labels as needed.

Formed in 2006, Jaxis Custom Soutions streamlines business/warehouse operations with technical solutions and services improving productivity while increasing available capital.
